

2/2-way Angle Seat Control Valve, threaded and weld end connections, DN 13-50

Type 2702 can be combined with...

Type 8630

Positioner
TopControl
continuous

Type 1067

Positioner
SideControl

Type 8635

Positioner
SideControl

Type 8323

Pressure
transmitter

Type 8030

Flow sensor

Type ST20

Temperature
sensor

The 2702 Control Valve consists of an 316L angle seat body with a rugged pneumatic piston actuator.

The parabolic trim results in a flow characteristic approximately 35% larger than conventional control valves. It is available in either stainless steel on stainless steel or with a durable PTFE seal for tight shut-off.

Type 2702 can be actuated by the Continuous TopControl Type 8630 or SideControl Type 1067 and 8635. TopControl/SideControl thus forms a mechanical and functional unit with the pneumatic actuator as a complete control valve system.

This system has been engineered for reliable accurate control in applications where high flow rate is an advantage.

Proven Applications

- Food and beverage CIP/SIP and auxiliary processes with steam, chilled water and glycol
- Textile machinery (steam, water, air) and dyeing
- Heat exchangers and autoclaves
- Sterilizers and washers
- Distillation apparatus
- Packaging and filling machinery

Technical data

Materials		
Body		Cast stainless steel 316L (conform to 1.4409)
Actuator		PA (polyamide) (PPS on request)
Sealing		
		SS/SS (stainless steel/stainless steel)
		PTFE/SS (PTFE/stainless steel)
Seat leakage IEC 534-4/EN 1349		
		Shut-off class IV for St.st./St.st.
		Shut-off class VI for PTFE/St.st.
Process media gases and liquids (vacuum version on request)		
		For neutral gases, water, alcohols, oils, fuels, hydraulic liquids, salt solutions, lyes, organic solvents, steam (10 bar(abs)/+180°C)
Viscosity		
		Max. 600 mm ² /s
Packing gland		
		PTFE V-rings (silicone grease) with spring compensation
Nominal pressure		
		PN 25 (body)
Temperatures		
Fluid		-10°C to +180°C ¹⁾ (max. +130°C for PTFE/St.st. sealing recommended)
Ambient		-10°C to +60°C ¹⁾
Control media		
		Compressed air
Pilot pressure		
		5.5 to 7 bar
Pilot air ports		
		G 1/4 stainless steel (SS)
Flow direction		
		Below seat
Mounting position		
		Any, preferably upright
Flow characteristic		
		Modified equal percentage
Control ratio (Kvs/KvO)		
		More than 50:1

Angle seat valve system

A complete continuous angle seat valve system consists of an angle seat control valve Type 2702 and a valve actuation system SideControl Type 1067 or Type 8635 or TopControl Type 8630. The positioners are only delivered in combination with an actuator as a part of a complete control valve. The following information is necessary for the selection of a complete control valve:

- **Item no.** of the seat control valve **Type 2702** (see Ordering chart)
- **Item no.** of the desired positioner **Type 8630, 1067 or 8635** (see separate datasheets)

Examples for variations of continuous angle seat valve systems

Valve actuation system: TopControl Type 8630

The Type 8630 is a digital electropneumatic positioner to be combined with pneumatically actuated process valves. Its compact design with an integrated position encoder and digital text display was designed for the growing requirements of industrial applications. Signal processing, regulation, and control of the internal positioning system are done using microprocessor-controlled electronics. Thanks to its easy-to-use operating structure, the positioner is simple and easy to operate despite its wide range of functionality.

Important features:

- Automatic commissioning of the control valve system and the optional process controller using the functions X-Tune or P.Co-Tune
- Automatic or manual definition of correction characteristic curves
- Binary inputs and outputs
- Analog output
- Fit seamlessly to Bürkert process valve systems
- 24VDC 3-wire

Valve actuation system: SideControl Type 8635, 2-wire, intrinsically safe

The Type 8635 is a digital electropneumatic positioner to be combined with pneumatically actuated process valves. Its robust, compact design was designed for the growing requirements of the process technology industry. Signal processing, regulation, and control of the internal positioning system are done using microprocessor-controlled electronics. Thanks to its easy-to-use operating structure, the positioner is simple and easy to operate despite its wide range of functionality.

Important features:

- Automatic commissioning of the control valve system and the optional process controller using the functions X-Tune or P.Co-Tune
- Automatic or manual definition of correction characteristic curves
- Binary inputs and outputs
- Analog output
- Mounting on variable acting valves according to DIN IEC 534-6 (NAMUR) and Bürkert process control valves
- 2-wire, power supply through setpoint or PROFIBUS PA
- ATEX certification
 - II 2G EEx ia IIC T6 Zone 1
 - II 3G/D EEx ia IIC T6 Zone 2/22
- Robust housing of hardcoated and plastic plated aluminum

Valve actuation system: SideControl Type 1067

The Type 1067 is a digital electropneumatic positioner to be combined with pneumatically actuated process valves. Its robust, very compact design was designed for the growing requirements of the process technology industry. Signal processing, regulation, and control of the internal or external positioning system are done using microprocessor-controlled electronics. Thanks to its easy-to-use operating structure, the position is simple and easy to operate despite its wide range of functionality.

Important features:

- Automatic commissioning of the control valve system using the X-Tune functions
- Automatic or manual definition of correction characteristic curves
- Binary inputs and outputs
- Analog output
- Mounting on variable acting valves according to DIN IEC 534-6 (NAMUR) and Bürkert process control valves
- 3-wire, 24 VDC
- Keypad/display unit
- Remote version with positioner separate from control valve

Application example

A 2702 control valve with a 1067 local PID controller. The valve is controlling the exit temperature of a media flowing-through a heat exchanger. The process input is a simple temperature transmitter.

Flow characteristic

Remarks on the flow characteristic

Modified equi-percentile flow characteristic, engineered for a quick response during peak flow demand (an advantage for many processes like heating/cooling with heat exchangers) and fine control at lower flow.

Kv values [m³/h]

Port size and orifice [mm]	Actuator size [mm]	Stroke [%]
